

# HTML Global Attributes

[< Previous](#) [Next >](#)

---

HTML attributes give elements meaning and context.

The global attributes below can be used on **any** HTML element.

---

## HTML Global Attributes

= Attribute added in HTML5.

Attribute	Description
<a href="#">accesskey</a>	Specifies a shortcut key to activate/focus an element
<a href="#">class</a>	Specifies one or more classnames for an element (refers to a class in a style sheet)
<a href="#">contenteditable</a>	Specifies whether the content of an element is editable or not
<a href="#">contextmenu</a>	Specifies a context menu for an element. The context menu appears when a user right-clicks on the element
<a href="#">data-*</a>	Used to store custom data private to the page or application
<a href="#">dir</a>	Specifies the text direction for the content in an element
<a href="#">draggable</a>	Specifies whether an element is draggable or not
<a href="#">dropzone</a>	Specifies whether the dragged data is copied, moved, or linked, when dropped
<a href="#">hidden</a>	Specifies that an element is not yet, or is no longer, relevant
<a href="#">id</a>	Specifies a unique id for an element
<a href="#">lang</a>	Specifies the language of the element's content
<a href="#">spellcheck</a>	Specifies whether the element is to have its spelling and grammar checked or not
<a href="#">style</a>	Specifies an inline CSS style for an element
<a href="#">tabindex</a>	Specifies the tabbing order of an element
<a href="#">title</a>	Specifies extra information about an element
<a href="#">translate</a>	Specifies whether the content of an element should be translated or not
